

1 **ABSTRACT**

2 Systems and methods for scheduled recording of multimedia content
3 streams are described herein. A scheduled recording service (SRS) is configured
4 to receive information about a multimedia content stream provided by a device in
5 a computer network and schedule a recording of the multimedia content stream at
6 a specified time. At the specified time, the scheduled recording service receives
7 the multimedia content stream from the device and saves the multimedia content
8 stream in local system storage. A scheduling application (SA) is configured to
9 provide a user interface for interacting with the scheduled recording service.
